

**FATALITY FREE FRIDAY 2020  
VICTORIA FACT SHEET**

**There should never be an excuse to take risks on or around our roads. Sadly, many Victorian drivers still do and the complacency of fewer cars on the road during coronavirus is driving more dangerous behaviour:**

- One in four Victorian drivers (26%) admit to taking road risks since the implementation of Covid-19 lockdowns
- A frightening statistic, likely driven by the fact that two thirds (67%) believe the roads are safer under current conditions
- And while you might have expected the road toll to reflect the minimal vehicles on the road, the national year-to-date road toll has only declined by 12.5% compared to the same period last year
- Speeding is the most common risk being taken by Victorian drivers during Covid-19 lockdown conditions (18% more), followed by using a mobile phone behind the wheel (10% higher), and running a red light or stop sign (5% increase)

**Speed is already the most common form of bad driving behaviour, but it's just one of many risks that together are creating an unacceptable amount of risk for road users:**

- Four in five Victorian drivers (82%) admit to breaking a road law
- When it came to excuses for this dangerous behaviour, the most common were: not paying attention (38%), a brief lapse in judgement (33%), or simply believing it was "safe" to do so (20%)
- Speeding is the most common with two thirds of the state's drivers admitting to speeding, but what's more, is it's happening at an alarming frequency. In fact, one in three drivers (29%) admit to speeding on at least a weekly basis, while a further 41% of drivers admit to speeding at least once every few months
- Added to this, distraction continues to be a common safety issue in the car. More than half admit to eating while driving, a third admit to using their mobile phone, and a quarter admit to looking away from the road at GPS or music for more than two seconds (which doubles your chance of a crash)
- A quarter of the state's drivers also admit to driving over the legal alcohol limit
- But Victorian drivers are not only a danger when behind the wheel, the majority also admit to pedestrian risks like jaywalking, more than a quarter of cyclists admit to riding without a helmet, and a quarter of passengers admit to distracting their driver

**In fact, not even having a child in the car is a deterrent to taking risks on the road:**

- More than one quarter of Victorian drivers (28%) admit to speeding, using their mobile phone or driving distracted when kids are in the car
- Risky road behaviour continues to climb when driving with adult passengers, with half of drivers (49%) admitting to taking risks behind the wheel
- This increases to 71% when driving solo, despite the risk to themselves and other road users, including children

**There is an obvious need for the community to take ownership of road safety in order to reduce the road toll:**

- Shockingly, only 6% of the state's drivers think about the safety of other road users when behind the wheel
- Victorian drivers admit they are four times more likely to spend money on paying bills (30%) than they would fixing a critical safety issue with their car (8%)
- Further, they are also four times more likely to book a holiday, buy something frivolous for themselves or spend a night out with friends, when compared to fixing a vehicle's safety issue
- One in five Victorian drivers (20%) believe walking home alone at night poses the same risk to their safety as travelling in a car
